UNDER THE SEA, COUNTING 1-2-3

By Elisabeth J.

One green sea turtle is swimming in the sea, searching for his next meal, sea grass and algae.

Two dolphins are swimming in a pod, leaping out of the water, off the coast of Cape Cod.

Three Atlantic puffins that have bills orange-red, are diving down to the ocean to be fed.

Four octopuses with rings that are blue, all their arms together equal thirty-two.

Five lobsters off the coast of Maine, living under rocks and in shallow sandy lanes.

Six stingrays with a barb in their tail - oh off they sail!

Seven clown fish are at the bottom of the sea, in the coral reef, among the colorful anemone.

Eight colorful seahorses gliding slowly through the sea, with tails curled around seaweed, they are so pretty.

Nine mysterious fish at the bottom of the deep sea, some with lights and sharp teeth, they look scary!

Ten beautiful sea stars found on every ocean floor, who could ask for anything more?

Many animals living in the sea are swimming, playing and eating –
happy to be free.
