

## Please join NHPTV and the Seacoast Science Center

for a one-day symposium on the state of STEM education (science, technology, engineering, and mathematics) in New Hampshire.

Aimed at K-12 and post-secondary educators as well as business, industry, community, non-profit and government leaders, attendees will assess the state of STEM in New Hampshire and discuss what can be done to improve STEM education.

This is an opportunity for groups with an interest in STEM to talk with one another about their needs and what steps can be taken to ensure that New Hampshire is competitive in STEM education.

And, the symposium includes a live videoconference with the NASA Ames Research Center and tour of the redesigned Seacoast Science Center.
